

JC Roundtable: Providing Digital Feedback

May 20, 2020

- Goals of feedback
 - Feedback toward revision or future iterative assignments
 - Explaining the assignment grade
- Challenges & Benefits
 - Lack of time/focus
 - Ability to provide quality feedback more efficiently
 - Providing grades more quickly (for online quizzes & tests)
 - Can copy/paste similar critiques
 - Can record one video explaining the problem(s) that most students had in greater detail
- Options:
 - Rubrics
 - Using an iPad/Apple Pencil
 - Recording video feedback
 - Using screensharing on Zoom
 - Using Moodle (?)
- What worked for you?
 - Mark: recording audio as you read the paper, encourage students to follow along. Able to provide more detailed comments this way, can easily attach to an email. Used the free program [Audacity](#)
 - Mindy: audio especially useful for language classes to replicate corrections, students often take it better than a written comment
 - Sandy: using Google Docs to help students see edits and comments, also used a paper rubric then scanned it using [Scannable](#) (app), and you can email directly from the app
 - Mindy: you can put rubrics into Moodle and access them, but it has to exist and be saved in the course and then you can pull it into specific assignments
 - George & Miki: using Moodle for exams--can download students' exams (as Word documents), convert into PDF, can grade (including a rubric if you want), then re-upload to Moodle
 - Mark: can record a video walking through a student's A paper (with their permission) to explain why it's an excellent paper
 - Mary Yetta: do you know if anyone has worked with online content from a publisher? In languages, they sent out free access codes to the students. Feedback to students was great and easy
 - Jim: [Notability](#) is an iPad app that allows notating a pdf in "real time" with voice notes. You can underline something and talk about why. Saved as a pdf that students can look at and listen to your comments.
 - Lisa recommends spending the \$8.99 for the many features of that app.
- What are you still seeking solutions for?

- How the heck does Moodle work when it comes to grading?! Can we maybe get some Moodle workshops over the summer?
